

Benefits of Becoming a TSP

The Transitional Safety Practitioner (TSP) designation is available to individuals completing curriculum-based safety, health, and environmental programs which meet BCSP Qualified Equivalent Program (QEP) standards. The TSP is an alternate path to the Certified Safety Professional® (CSP®), waiving the requirement to sit for the Associate Safety Professional® (ASP®) exam. Individuals completing a program from a QEP may be eligible for the TSP designation.

There are numerous benefits for obtaining the TSP designation, including:

- Recognition for being on a path toward the CSP certification.
- Recognition for the level of preparation for professional safety practice.
- A waiver of the ASP examination requirement.
- A digital certificate awarding the TSP designation.
- A digital badge and your name appears on the BCSP Credential Holder Directory.
- Use of the complimentary BCSP Career Center.
- Use of the BCSP mentor program to assist in career development.

Individuals must apply for the TSP during the program's applicable dates as listed on the QEP website. All TSPs pay an annual renewal fee to maintain their designation and may hold the TSP for up to six (6) years. Once a TSP meets the eligibility requirements for the CSP certification (a bachelor's degree and four (4) years of professional safety experience) they may submit their CSP application online by logging into *My Profile* at bcsp.org. If an individual lets their TSP expire, they will be required to apply for and pass the ASP exam or obtain another BCSP qualified credential before applying for the CSP. More information about the CSP can be found at bcsp.org/csp.

For more information about the TSP visit bcsp.org/tsp.
